

METHOD FOR MODIFYING AND PUBLISHING A WEB PAGE

ABSTRACT OF THE DISCLOSURE

5 A method for dynamically modifying static
web pages is disclosed. The method identifies the
type of data being altered. Once identified, a
relationship between content data and form data is
established. The relationship between the two types
of data follows the modifications. A publishing
10 heuristic is employed to record the relationship
between the two types of data. Once maintained, any
static web page that utilizes the information may be
automatically updated. The method eliminates the need
for requiring each web page to be dynamically
15 generated automatically with a large number of
computer resources or requiring each web page to be
manually reviewed and updated, if necessary.
